Charles Komar & Sons, Inc. Commitment to Protect Forests Through Our Paper, Packaging, and Fabrics Choices

Charles Komar & Sons, Inc. has always been committed to sustainability in all of our clothing. For this reason, Charles Komar & Sons, Inc. is committed to protecting the world's forests through our approach to the procurement of pulp, paper, packaging, and fabrics.

As substitutes for single-use plastics are sought, it is recognized that the environmental issues arising from increased demand for forest-based products must be addressed. This policy aims to support the necessary shift away from single-use plastics, concurrent with the pressing need to conserve Ancient and Endangered Forests.

Conservation of Ancient and Endangered Forests and Ecosystems

Charles Komar & Sons, Inc. will support approaches and systems to build a future that does not use Ancient and Endangered Forestsⁱ in the packaging, paper, or in man-made cellulosic fabrics, including rayon, viscose, lyocell, modal, and other trademarked brands. We will influence these supply chains in order to protect the world's remaining Ancient and Endangered Forests and endangered speciesⁱⁱ habitats.

To do this, we will:

1. Work with Canopy and our suppliers to support collaborative and visionary solutions that protect remaining Ancient and Endangered Forests in the Coastal Temperate Rainforests on Vancouver Islandⁱⁱⁱ and the Great Bear Rainforest^{iv}, Canada's Boreal Forests^v, and Indonesia's Rainforests.^{vi}
2. Assess our existing use of man-made cellulosic, packaging, and paper, and eliminate sourcing from endangered species habitats and Ancient and Endangered Forests such as the Canadian and Russian Boreal Forests, Coastal Temperate Rainforests, tropical forests, and peatlands of Indonesia, the Amazon, and West Africa within 24 months of adopting this policy.
3. Work to eliminate sourcing from: companies that are logging forests illegally^{vii}; areas that have been deforested, and natural forests that have been converted after 1994^{viii}; or areas being logged in contravention of First Nations/tribal/indigenous peoples' and community rights, or from other controversial suppliers within 24 months of adopting this policy.
4. We will complete supply chain mapping within the first 12 months of adopting this policy. During the supply chain mapping process, if we find that any of our products are sourced from Ancient and Endangered Forests, endangered species habitats, or illegal logging, we will act immediately and engage our suppliers to change practices, eliminate these sources, and/or re-evaluate our relationship with them.

Design and Prioritization of Reduction and Reuse

The reduction and reuse of paper and packaging is of paramount priority for the protection of the world's limited forest resources and has a clear and beneficial impact on reducing costs.

Therefore, over the next year, Charles Komar & Sons, Inc. will prioritize developing a reduction and reuse strategy with targets and timelines. Over the next 2 years, Charles Komar & Sons, Inc. will:

- Source or design re-usable/refillable shipping boxes to reduce corrugated paper and paperboard
- Design and implement e-commerce, shipping, display, and wrapping systems that minimize the use of paper
- Utilize reusable packaging systems for intra-business applications
- Increase the use of digital communication, marketing, and accounting systems
- Adopt best practices, including researching and applying emerging and circular economy innovations.

KOMAR

Shift to More Environmentally and Socially Beneficial Fabrics

Charles Komar & Sons, Inc. will collaborate with Canopy, innovative companies, and suppliers to encourage the development of fiber sources that reduce environmental and social impacts, with a focus on agricultural residues^{ix} and recycled fabrics. We will participate in trials where appropriate.

Within 12 months of adopting this policy, Charles Komar & Sons, Inc. will put in place a preference for purchasing man-made cellulosic products that include a minimum of 50% of these innovative fiber sources and develop a procurement target for these closed-loop solutions based on viscose fiber producer innovation.

Improve the Environmental Quality of Packaging and Paper

Charles Komar & Sons, Inc. will collaborate with Canopy, innovative companies, and suppliers to encourage the development of Next Generation Solutions and packaging and paper^x that reduce environmental and social impacts, with a focus on agricultural fibers (particularly residues), ¹⁰ and recycled content. We will use Canopy's [Ecopaper database](#) and [The Paper Steps](#) as a guide for paper and packaging sourcing.

To help reduce the footprint of the paper and packaging we use^{xi}, Charles Komar & Sons, Inc. will:

- Do an annual review of all of our paper and packaging use in order to identify areas where we can increase paper use efficiencies, reduce paper and packaging basis weights, and save money and resources.
- Give preference to paper/packaging with high-recycled content, specifically post-consumer waste content, reaching an overall recycled fiber content in our papers and packaging of at least 50% average within 3 years;
- Encourage our suppliers to continuously improve and expand the availability of recycled content in papers/packaging.
- Source packaging and paper from alternative fibers such as wheat straw or other agricultural residues, when possible;
- Support research and development of commercial-scale production of pulp, paper, and packaging from alternative fiber sources such as wheat straw and other alternative fibers, including participation in trials as appropriate.

Forest Certification

Where the above conditions are met (including 1-4), Charles Komar & Sons, Inc. will request that all fabric, packaging and paper sourced from forests are from responsibly managed forests, certified to the Forest Stewardship Council (FSC) certification system, and where FSC certified plantations^{xii} are part of the solution.

Recognizing, Respecting, and Upholding Human Rights and the Rights of Communities

To respect the right of Indigenous People and Local Communities (IP/LC)^{xiii}, which are codified under the UN Guiding Principles on Business and Human Rights, we will request that our upstream suppliers confirm that they carry out operations consistent with the UN Declaration on the Rights of Indigenous Peoples (UNDRIP), which includes allowing impacted IP/LC to grant or withhold their Free, Prior and Informed Consent (FPIC).^{xiv}

Reduce Greenhouse Gas Footprint

Charles Komar & Sons, Inc. recognizes the importance of forests as carbon storehouses and their role in maintaining climate stability. As part of our ongoing leadership on climate, we will support initiatives that advance forest conservation to reduce the loss of high-carbon stock forests by encouraging suppliers to avoid harvest in these areas and by giving preference to those that use effective strategies to actively reduce their greenhouse gas footprint.

KOMAR

Safeguarding Water and Critical Systems

Charles Komar & Sons, Inc. recognizes that Ancient and Endangered Forests are vitally important systems for the protection and regulation of water from the local to global level. Large areas of contiguous forest act as a biotic pump, helping to move moisture from coastal areas to the interior of continents. We give preference to those suppliers that use effective strategies to actively maintain and restore forest intactness to maintain forests' function of regulating the flow and purity of water at a micro and macro scale.

Support Best Processing Practices and Procurement

Charles Komar & Sons, Inc. requires that our man-made cellulosic suppliers use best available environmental practices for processing, such as the 'closed-loop' lyocell processing.

We will give purchasing preference to paper and packaging that has been processed utilizing technologies such as chlorine-free bleaching^{xv}.

Promote Industry Leadership

Charles Komar & Sons, Inc. looks to create a positive impact together with our suppliers, partners, and customers. As implementation progresses, Charles Komar & Sons, Inc. will work with suppliers, non-governmental organizations, other stakeholders, and brands that work with Canopy to support the protection of Ancient and Endangered Forests and forward solutions to reduce the demands upon forests. We will also seek opportunities to educate and inform the public on these issues and solutions through our marketing and communications.

Footnotes

ⁱ Ancient and Endangered Forests are defined as intact forest landscape mosaics, naturally rare forest types, forest types that have been made rare due to human activity, and/or other forests that are ecologically critical for the protection of biological diversity. Ecological components of endangered forests are: Intact forest landscapes; Remnant forests and restoration cores; Landscape connectivity; Rare forest types; Forests of high species richness; Forests containing high concentrations of rare and endangered species; Forests of high endemism; Core habitat for focal species; Forests exhibiting rare ecological and evolutionary phenomena. Key endangered forests globally are the Canadian and Russian Boreal Forests; Coastal Temperate Rainforests of British Columbia, Alaska and Chile; Tropical forests and peat lands of Indonesia, the Amazon and West Africa. For more information on the location and definitions of Ancient and Endangered Forests, please go to: <https://canopyplanet.org/tools/forestmapper/>

ⁱⁱ A good source to identify endangered, threatened and imperiled species is NatureServe's Conservation Status rankings for imperiled species that are at high risk of extinction due to very restricted range, very few populations (often 20 or fewer), steep declines in populations, or other factors.

ⁱⁱⁱ Coastal temperate rainforests are rare and only ever covered 0.2% of the planet. On Vancouver Island only 10% of Vancouver Island's productive old growth rare coastal temperate rainforest remain. These stands of 1,000-year old trees continue to be harvested despite their immense value to local communities for tourism. Their accessibility and beauty is a remarkable global asset and Canopy is working to see these last stands protected.

^{iv} A legal conservation plan is now finalized for the Great Bear Rainforest. On February 1st, 2016 the Government of British Columbia, First Nations, environmental organizations and the forest industry announced an Ecosystem-based Management framework that sets 85% of this region off limits to logging and stringent logging rules in the other 15%. Provided these agreements are fully implemented – sourcing from this Ancient and Endangered Forest region can be considered to be within sustainable levels. We encourage ongoing verification of this through renewal of Forest Stewardship Council certification.

^v Protection of Boreal Forests where the largest remaining tracts of forests are located worldwide is critical. Canada's Boreal Forest contain the largest source of unfrozen freshwater world-wide and are part of the world's largest terrestrial carbon sink – equivalent to 26 years worth of global fossil fuel use. Canopy is committed to working collaboratively on the establishment of new protected areas, the protection of endangered species and the implementation of sustainable harvesting in Canada's Boreal Forest.

^{vi} Indonesia experiences the second highest rate of deforestation among tropical countries, with the island of Sumatra standing out due to the intensive forest clearing that has resulted in the conversion of 70% of the island's forested area (FAO Forest Assessment 2010; Margono, B.A. et al. 2012).

^{vii} Legal forest management is management that complies with all applicable international, national, and local laws, including environmental, forestry, and civil rights laws and treaties.

^{viii} Canopy uses the definitions of deforestation and conversion developed by the Accountability Framework Initiative (AFI). They can be found here: <https://accountability-framework.org/use-the-accountability-framework/definitions/>

^{ix} Agricultural Residues are residues left over from food production or other processes and using them maximizes the lifecycle of the fibre. Fibres used for paper products include cereal straws like wheat straw, rice straw, seed flax straw, corn stalks, sorghum stalks, sugar cane bagasse, and rye seed grass straw. Where the LCA (life cycle analysis) shows environmental benefits and conversion of forest land to on purpose crops is not an issue, kenaf can also be included here. Depending on how they are harvested, fibres for fabrics may include flax, soy, bagasse, and hemp. (Agricultural residues are not from on purpose crops that replace forest stands or food crops.)

^x Environmentally friendly fibre sources include:

- Post-consumer recycled waste fibre
- Pre-consumer recycled fibre
- Agricultural residue defined below

komarbrands.com

Jersey City,
NJ 07302

- Fibre from FSC certified tenures (no controlled wood from controlled wood tenures)

^{xi} Paper Task Force Report and the Environmental Paper Network Paper Calculator. “The scientific basis for these conclusions is the analysis of the Paper Task Force, a three-year research project convened by Environmental Defense and involving Duke University, Johnson & Johnson, McDonald's, Prudential Insurance, and Time Inc. The Paper Task Force examined environmental impacts through the full lifecycle of paper, along with economic and functional issues across major paper grades. Its findings were extensively peer-reviewed by scientists, academics, environmental experts, and government and industry representatives.”

^{xii} Plantations are areas that have been “established by planting or sowing using either alien or native species, often with few species, regular spacing and even ages, and which lack most of the principal characteristics and key elements of natural forests”. Plantations prior to 1994 are often FSC certified. Source FSC International Generic Indicators: <https://ic.fsc.org/en/document-center/id/335>. Forest plantations can play an important role in supplying fibre for products, it is also recognized that clearing of primary forests for plantations has contributed significantly to the destruction of forests in many parts of the world. Charles Komar & Sons, Inc. recognizes that credible regional conservation plans that identify areas to be conserved and also restored back to natural forests is the best way to ensure that sourcing from plantations is done sustainably. We will use the FSC plantation requirements as a baseline. Additionally, we will advocate for our suppliers and national and regional governments to engage in, and develop, conservation plans for the regions from which we source as a means to distinguish those plantations that are contributing to solutions and those that are exacerbating the problem.

^{xiii} There is not one universal definition of Indigenous Peoples, however in accordance with international legal agreements such as the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), the International Labour Organization (ILO) Convention 169 and the Policy on Indigenous and Tribal Peoples by the Food and Agriculture Organization (FAO), Indigenous Peoples share certain characteristics. Please see Food and Agriculture Organization (FAO), *Free Prior and Informed Consent: An indigenous peoples' right and a good practice for local communities*. <https://www.fao.org/3/i6190e/i6190e.pdf> page 12. Note that other bodies respect and uphold this definition including, for example, the FSC. <https://connect.fsc.org/document-centre/documents/resource/332> page 22. In addition, the term “Indigenous Peoples and local communities” and its acronym “IPLC” are widely used by international organizations and conventions to refer to individuals and groups who self-identify as indigenous or as members of distinct local communities. We adopt this terminology in this assessment, with particular emphasis on those who maintain an inter-generational historical connection to place and nature through livelihoods, cultural identity, languages, worldviews, institutions, and ecological knowledge. A local community can be long-standing ('traditional') or relatively new, include a single or multiple ethnic identities and be permanently settled or mobile. A local community should have a form of political identity that enables it to exercise its rights and responsibilities with respect to its territory and neighbors. <https://www.ipbes.net/glossary-tag/indigenous-peoples-and-local-communities>
